

Ilmari Kylliäinen

Language Technologist & Web Developer

I am a passionate and experienced language technologist and web developer. I like everything related to languages: studying them and researching them - but also figuring out how to make computers understand and produce them. Along with my language technology studies, I also became interested in web development, especially front-end, and I also completed a lot of computer science studies. In addition, I have noticed that I enjoy designing websites and UIs.
